

Prompts to add:

inspired by the structure

- you can change / move / adapt / add / remove / adjust

every wood stick as you want to create the structure of your futur generative drawing.

- if you don't like the result you can change it as many time as you want to.

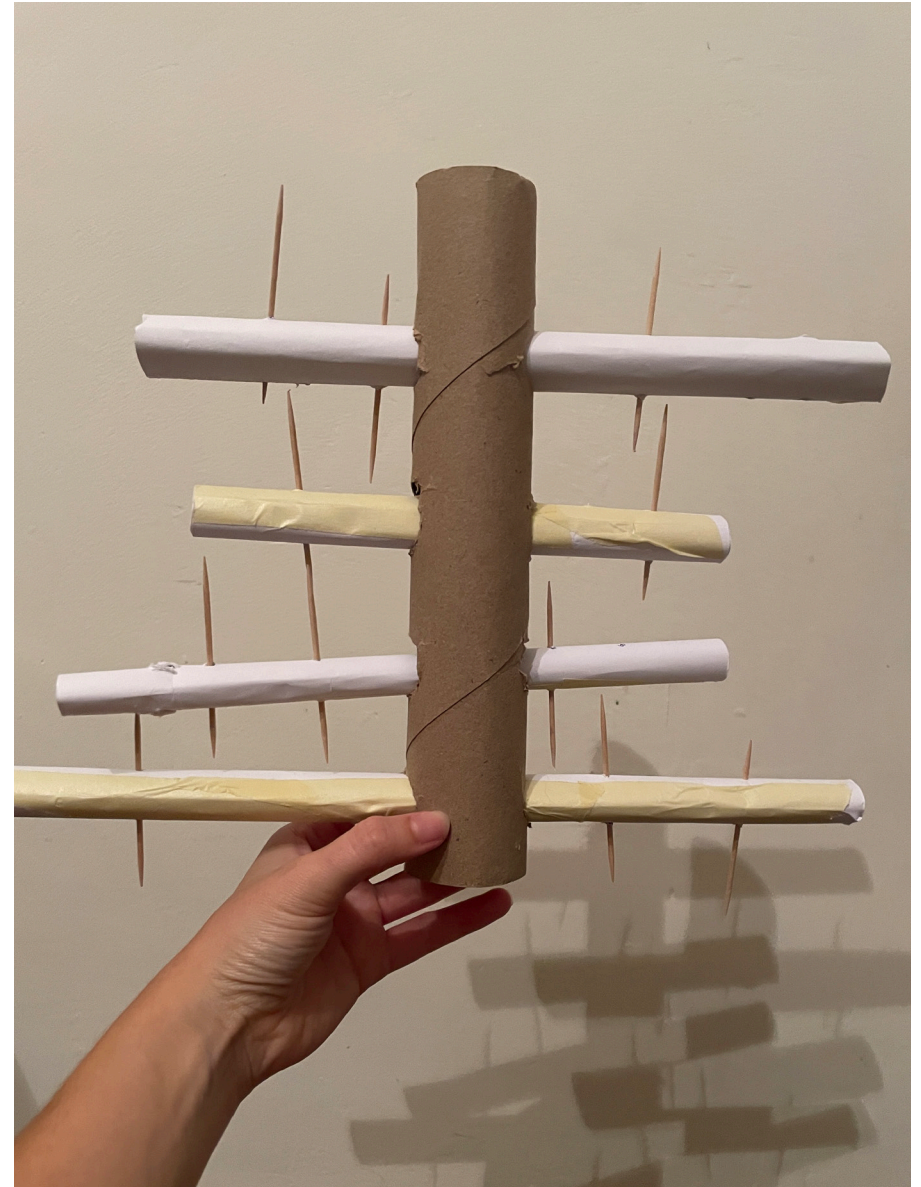

- Size can be huge to let people moving all around the object and to feel like they are reallig making something with "Strength"

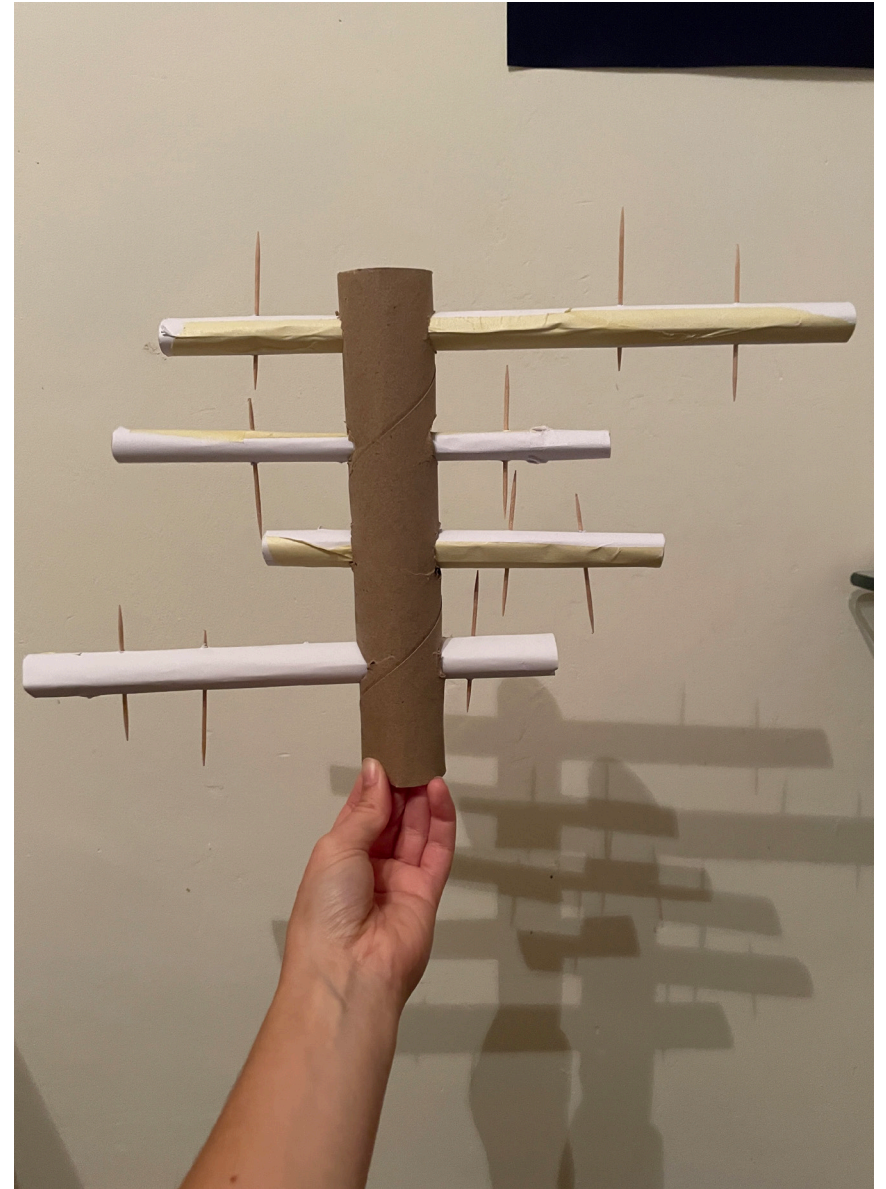

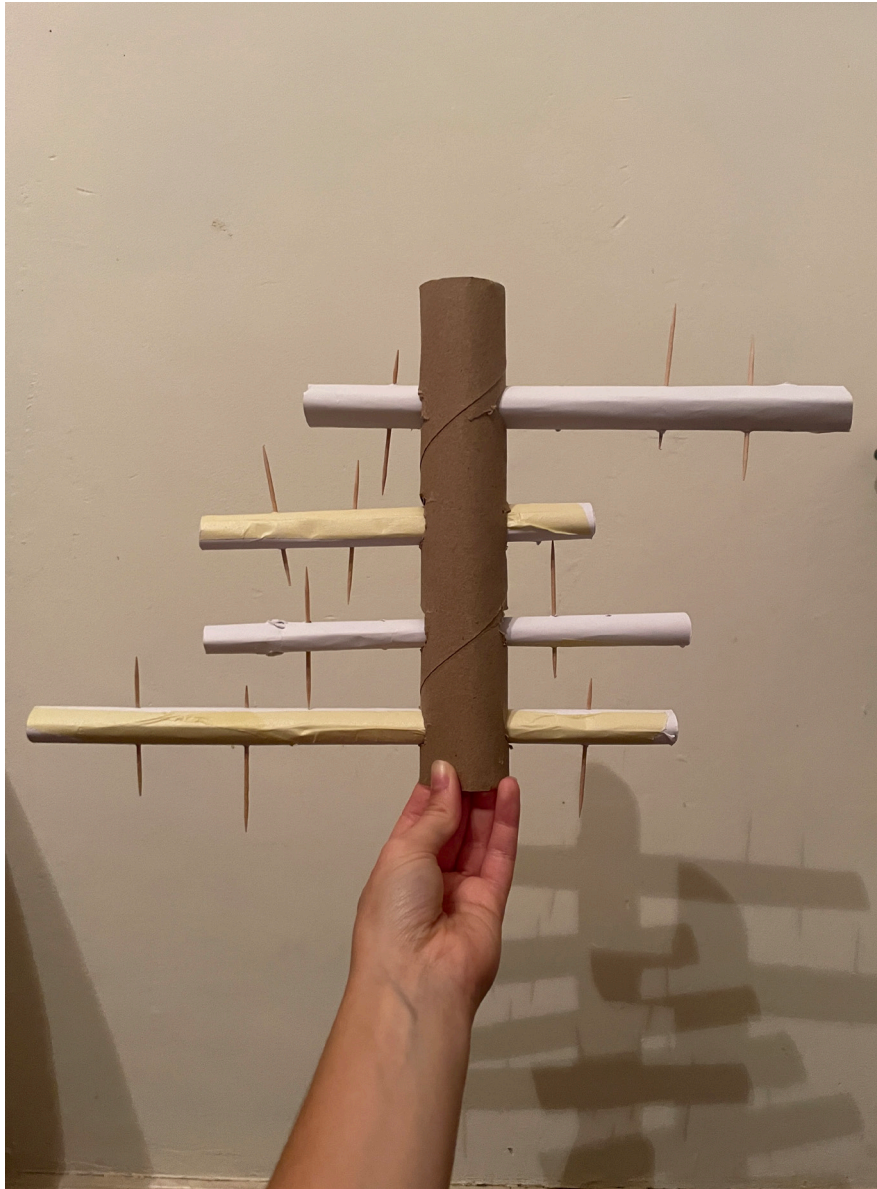

- The A.I can also ajust the wood as many time he wants to, to feel like you are playing / creating with him.

ADJUSTABLE STRUCTURE

The structure is editable as desired. You can add, remove, pull and swap each element to generate a new one.

Positioned in front of a screen, the chosen image will change according to how the user plays with it.

Where is the personnality of the A.I ?
Is it really «Playfull» ?
What can you genereate ?
